

1. In the use case diagram, a non-member can **view inventory**, what does that mean? Does that entail search? Because search is shown as a different use case.
2. In 4.7 inventory search -- it says "Users navigate with the menu to find videos", is this similar to netflix? What exactly does this entail?
3. Members can **view inventory**, **search by name**, and also **search from menu**, what is search from menu exactly?
4. Is there a search by category? This feature doesn't exist in the SRS it seems or the use case diagram.
5. What is the difference between **order** and **rent video** in the context of a member? Note that there is also a use case called **add to cart**.
6. Can we assume a customer is returning all of their video tapes they order at once? Or are they returning individual tapes?
7. Can a customer have rentals with different lengths in the same order?
8. Can a customer cancel their order before payment?
